

Applied Pharmacological Perspectives

A bespoke course designed to develop knowledge of pharmacology as it applies to your working environment.

What do I learn?

The course includes core knowledge of pharmacokinetics, pharmacodynamics and adverse drug reactions.

Specialist themes have been identified, though these are not an exclusive list and content can be tailored to your work area. Themes include:

- psychopharmacology
- cardiovascular drugs
- drugs in diabetes
- drugs in gastric disorders
- drugs and the geriatric population;
- drugs and hepatic disorders
- NSAIDs
- drugs and reproductive disorders
- drugs and respiratory disorders
- drugs of abuse and toxins
- pharmacology of the central nervous system.

Who is it for?

This course is ideal for participants with interest in pharmacology and experience of this area in their field (we suggest three years experience) ideally supported by a recognised national body current registration for CPD.

Applied Pharmacological Perspectives

What do I learn and where?

Course structure and delivery:

This is a blended learning course using the Blackboard Virtual Learning Environment (VLE) as its central tool with face-to-face tutorials, workshops or residentials negotiated by demand.

A typical course will be supported by the tutor via email and through the Blackboard VLE tool, with four face-to-face half-day sessions negotiated by the participants. The delivery of the face-to-face session need not be on University premises but at a mutually convenient location.

Options for gaining University Credits:

Individual components of the course can be undertaken as "stand-alone" periods of study for which participants can receive a certificate of attendance. If you wish to accredit your developing practice then this course carries 15 credits at level 3 which can then form part of a Degree Pathway or CPD study.

Assessment:

For the credit rated course there is a single piece of assessment; a work based report. The report title is negotiated between the tutor and yourself and must be on a current topic of relevance to your area of work. The reports must link theory and practice with reflection.

Where does it lead?

The University Certificate in Applied Pharmacological Perspectives is a free-standing award in its own right.

How do I apply?

For further details or an informal discussion with the course tutor please contact:
