

## **SPSS Introduction**

This session will be 'hands-on' and will use a questionnaire data set from either myself or one of the participants. The session will aim to cover the following:

- Transferring data between Excel and SPSS
- The variable and data views in SPSS and variable definitions
- Checking that your data is ready for analysis in SPSS (including some common pitfalls)
- An introduction to transforming data in SPSS and creating new variables
- Getting a feel for your data: descriptive and frequencies
- Starting analysis: cross tabulations
